What if you could unlock value potential by having full transparency over your business processes?
How Process Mining works

It is a combination of techniques that are used to reconstruct business processes. Based on ERP data, actual process flows are visualized which helps to measure the quality and effectiveness of the processes.

How EY can help

Benefits from using Process Mining

Process transparency
Real-time identification of policy violations
Predictive analytics
Internal control effectiveness
Cost-cutting potential
Visualization

Our approach

- Convenient data extraction from your source system
- Automatic, intuitive and multi-functional process visualization
- Analytical functionalities to detect cost, time and quality issues
- Efficient and effective benchmarking
